Olsztyn 7.01.2016

To whom it may concern:

We hereby certify that we have received the following opinion regarding DRAMIŃSKI 4VET veterinary ultrasound scanner from Gunnar Brostedt, Global Assortment Manager and Course Leader, DeLaval International AB, Sweden.

We have used the 4vet during a 4 weeks milking trial and at two training occasions so far. We will now during 2014 use at 4 different training occasions and we will for sure get more use of it in milking trials. We have found it as a brilliant tool to visualize what happens in the udder during milking. The 4vet is very useful both as educational instrument and excellent when analyzing teat conditions before and after milking. We can now very fast make good analyzes and compare influence on the teats from various parameter settings and milking machine configurations. 30 April 2014.

We appreciate the functionality in 4VET very much, we have used frequently it in our internal trainings for 2 years now. 7 January 2016.

Best regards

Gunnar Brostedt
